Areas of Success:
I can’t say that we really had any areas of success. There was only one class that met even half of its outcomes, and that was MA 095, which we don’t teach. Otherwise, it’s clear that we (and our students) have a lot of progress to make.

Areas of Concern:
I remain convinced that the largest area of concern is motivating our students and giving them some self-esteem and self-confidence. They give up too easily, most likely because they believe that they can’t learn the material. But we should also examine every aspect of our classes to see if there is something that we could change that would give them a better shot at succeeding.

Impact Issues:
Convincing faculty to make changes in what they do, as well as the issues mentioned above in Areas of Concern.

Resources Needed:
I would say that resources on best practices in developmental mathematics would be useful. I’m not sure that additional resources would be needed at this point.

CAS Feedback:
I heard of no problems using the CAS.
